Eclipse 2 includes software and hardware designed exclusively for photograph documentation and management of digital evidence. Eclipse 2 allows forensic examiners to view on-screen what the camera sees and to operate devices while snapping photos and videos with a foot pedal. Media handling features, editing tools and a robust report builder offer time savings and efficiency for anyone tasked with documenting evidence. Validating forensic examinations and capturing information unobtainable with extraction tools is easy and fast. The Eclipse 2 Pro SLR Kit uses a Canon SLR camera and includes the highest quality photography platform, components and software features available.

- Capture images of cell phone, tablet, GPS, laptop and other mobile device screens
- Photograph information from apps or areas containing key evidence
- Examine cell phones not supported by other forensic tools for data extraction
- Add categories, tags, and other information
- Maintain chain of custody with forensic process and hashing
- Create beautifully designed and functional PDF, HTML, Word and Excel reports
